The Purpose Driven Wealth Plan™

How to Eliminate Debt and Build Wealth at the Same Time

By Denise Boisvert and Steve Gibbs, Esq. AEP

Table of Contents

FOREWORD *By Steve Gibbs, Esq. AEP*

In my years as an estate planning attorney, I've sat across from hundreds of families who worked hard, played by the rules, and still arrived at the planning table without the foundation they needed.

They had wills. Some had trusts. A few had retirement accounts that looked reasonable on paper.

What most of them didn't have was a system. A living, compounding, liquid financial infrastructure that worked for them while they were alive and protected the people they loved after they were gone.

That gap is why I co-authored this ebook with Denise.

I've watched Denise work with clients for years. What she does is not complicated to understand — but it is rare to find. She takes people who believe they are too far behind, too buried in debt, too financially compromised to build anything meaningful — and she shows them the math. Not a sales pitch. Not a promise. The actual numbers, applied to their actual situation, inside a system that is built on contractual guarantees rather than market hope.

What I bring to this conversation is the view from the other end. I see what happens to wealth when there is no structure around it. I see families navigate probate when there didn't need to be probate. I see inheritances diluted by taxes that proper planning would have eliminated. I see the difference between a client who built a policy inside a well-designed estate plan and one who didn't — and that difference is measured in hundreds of thousands of dollars and years of family stress.

The Purpose Driven Wealth Plan™ is not just a debt elimination strategy. It is the foundation of a complete financial legacy. The policy that frees you from credit card debt today is the same policy that funds your retirement, protects you if your health fails, and passes a tax-free inheritance to your children without a single day in probate court.

That is not an accident of good fortune. That is a plan.

Denise will show you how to build it. I hope you'll let her.

— Steve Gibbs, Esq. AEP Co-Founder, Insurance & Estates

INTRODUCTION *By Denise Boisvert*

I almost lost a client to her credit card statements.

She had done everything right leading up to our conversation. She'd researched the Infinite Banking Concept. She understood how a properly structured whole life policy worked. She could see — clearly — how redirecting her cash flow into her own system would change her financial trajectory. She was exactly the kind of person this strategy was built for.

Then she pulled up her balances.

Four credit cards. Combined minimum payments just over $900 a month. And she looked at me and said what I've heard more times than I can count:

"I can't afford this right now. Once I get the debt paid off, I'll come back."

She meant it as a responsible decision. Pay off what you owe. Then build. That's the sequence everyone gets taught. Dave Ramsey made it famous. Banks depend on it. And it sounds so reasonable that most people never stop to question it.

I let her talk. And then I asked her one question.

"When the debt is gone — what will you have?"

She paused. Because she hadn't thought past the zero. She'd been so focused on eliminating the debt that she hadn't considered what she would be building toward while she was doing it. The answer, under the conventional plan she was following, was a cleared balance and a savings account earning almost nothing. She would arrive at zero. Just zero. No infrastructure. No compounding engine. No policy that had been quietly building for four years while the debt was being eliminated.

That conversation is why I wrote this ebook.

Not for the person who has everything figured out. For the person sitting exactly where she was — carrying debt, feeling behind, and believing the lie that they have to choose between getting out of debt and building wealth.

You don't have to choose. That's the whole point.

What You're About to Read

This ebook introduces you to the Purpose Driven Wealth Plan™ — the framework I've spent twenty years refining with real clients in real financial situations, and the same system laid out in complete detail in my book *Designing a Debt-Free Life with the Purpose Driven Wealth Plan™*, which I co-authored with Steve Gibbs.

In seven chapters, you'll see exactly why the false choice between debt elimination and wealth building exists, who benefits from you believing it, and what becomes possible when you stop accepting it.

You'll see the real cost of what you're currently paying — not just in interest, but in the compounding growth that never happens while your money moves toward creditors instead of toward a system you own.

You'll understand how a properly structured whole life policy works as infrastructure, not insurance — and why most agents never design one this way.

You'll walk through the Redirect, Repay, Reuse strategy step by step, with real numbers from real clients who started exactly where you are.

And you'll arrive at what I believe is the most important idea in this entire ebook — the concept I call the Different Zero. Because when the debt is gone, the question isn't whether you made it to zero. The question is what kind of zero you built.

Who This Is For

This ebook is for the person who is tired of feeling like they're doing everything right and still falling behind.

It is for the person who has looked at IBC and thought *I can't afford this right now* — without realizing that the debt they're carrying is exactly the cash flow that funds the strategy.

It is for the person who senses, correctly, that the conventional financial playbook was never written in their favor — and who is ready to look at a different system with an open mind and a willingness to do the math.

It is not for someone looking for a shortcut. The Purpose Driven Wealth Plan™ requires consistency, intentionality, and a willingness to think about money differently than you've been taught to. It is not magic. It is infrastructure. And infrastructure takes time to build — but once it's built, it works whether you're watching it or not.

A Note on How to Read This

Each chapter ends with a Further Reading section pointing you to deeper resources at InsuranceandEstates.com. These aren't filler links. They're the articles, guides, and tools that will answer the follow-up questions each chapter is likely to raise. Use them. The more you understand the system before your first conversation with an advisor, the more productive that conversation will be.

And when you're ready for the complete implementation guide — the full strategy applied to credit card debt, mortgage payoff, retirement income, living benefits, and legacy planning — that's what *Designing a Debt-Free Life with the Purpose Driven Wealth Plan™* is for. This ebook is the door. The book is the blueprint.

Let's walk through it together.

— Denise Boisvert Licensed Insurance Professional & Debt Elimination Strategist
Co-Author, Designing a Debt-Free Life with the Purpose Driven Wealth Plan™

CHAPTER 1: The False Choice

There's a conversation Denise has had more times than she can count.

Someone finds her. They've done their homework. They understand the concept, they like the numbers, and they can see how a properly structured whole life insurance policy could change their financial trajectory. They're ready.

Then they look at their credit card statements.

"I can't afford this right now. Once I get the debt paid off, I'll come back."

It sounds responsible. It sounds like the right order of operations. Pay off what you owe, then build wealth. Eliminate the bad before you create the good.

The problem is, it's exactly backwards.

And the cost of that mistake isn't just time. It's the compounding growth you never got, the death benefit that never existed, and the optimized policy that never had a chance to mature — all because you were waiting for the "right time" that the traditional financial playbook told you to wait for.

The Sequence Nobody Questions

We've all absorbed the same financial story: debt is the enemy, savings is the goal, and you can't do both at once. Dave Ramsey built an empire on that sequence. Pay off every debt, smallest to largest, with fierce intensity. Then, and only then, do you start building.

It works for some people. But it leaves a critical question unasked: *what are you building toward?*

If the answer is a savings account earning a fraction of a percent, or a 401(k) at the mercy of a market you can't control, then the sequence might technically work — and still leave you exactly where you didn't want to be.

The Infinite Banking Concept operates on a different premise entirely. It doesn't ask you to choose between eliminating debt and building wealth. It shows you how the same dollars can do both — simultaneously — inside a system you control.

Why the False Choice Exists

The financial industry profits from your money moving in one direction: toward them. Banks earn interest when you carry a balance. Lenders earn interest when you carry a mortgage. Investment firms earn fees when you park money in their products. None of them benefit when you redirect that cash flow into your own system.

So the conventional wisdom — "get out of debt first, invest later" — conveniently keeps money flowing toward institutions and away from you.

The velocity banking community understands part of this. They know that the speed at which money moves matters more than the amount. But velocity alone, without the right infrastructure, is just fast movement without a destination.

What Denise discovered — and what this ebook is built on — is that the infrastructure itself is the answer. When you have a properly structured policy in place, your debt elimination and your wealth building don't compete. They feed each other.

The Client Who Almost Walked Away

The clients who come closest to missing this are often the most financially responsible ones. They're not reckless spenders. They're people who take debt seriously, feel the weight of it, and want to do the right thing.

But doing the right thing inside the wrong system still produces the wrong result.

When someone walks away from IBC because they're carrying credit card debt, they don't just delay wealth building. They keep sending money to creditors with nothing to show for it — no cash value accumulating, no death benefit growing, no system being built. They pay off the debt eventually, and they arrive at zero. Just zero. No infrastructure. No compounding engine. No policy waiting to grow.

That's the false choice in action. And Chapter 5 is where we show you what a different kind of zero looks like.

What This Ebook Will Show You

The Purpose Driven Wealth Plan™ — the framework built by Denise and outlined in full in *Designing a Debt-Free Life* — is not a debt payoff plan with insurance bolted on. It's an integrated system where a high cash value whole life policy becomes the engine that drives debt elimination *and* wealth creation at the same time.

In the chapters ahead, you'll see the real cost of what you're currently paying, how the Redirect, Repay, Reuse strategy works, and why the end of the debt story is actually the beginning of something much larger.

You don't have to choose. You never did.

Infinite Banking vs. Velocity Banking — How these two strategies compare, where they overlap, and why infrastructure matters more than speed alone.

Cash Value Life Insurance — What cash value actually is, how it grows, and why not all policies are built the same way.

CHAPTER 2: What Your Debt Is Really Costing You

Most people know credit card debt is expensive. What they don't know is how expensive — not just in dollars, but in the wealth that never gets built while the interest clock is running.

This chapter is about making that cost visible. Because once you see it clearly, the urgency of the Purpose Driven Wealth Plan™ stops being a financial concept and starts being personal.

The Minimum Payment Trap

Credit card companies are not in the business of helping you get out of debt. They're in the business of keeping you in it — as long as possible, at the highest rate they can legally charge.

The minimum payment is their masterpiece.

It's calibrated to feel manageable. Two percent of your balance. Maybe a flat $25. Enough to keep you current, never enough to make real progress. Meanwhile, interest is accruing daily on everything you owe — and that interest gets added to the balance, which generates more interest, which compounds against you month after month.

This is not an accident. It is a design.

Consider a $10,000 balance at 24.99% APR. Make only minimum payments and you'll spend over a decade paying it off — and hand the credit card company more than $15,000 in interest along the way. You borrowed $10,000 and paid back $25,000. For the privilege of using money that was never really working for you.

That's the real cost of credit card debt — and most people never stop to do that math.

Compound Interest: The Force That Works Both Ways

You've heard compound interest described as the eighth wonder of the world. Einstein may or may not have said it, but the math is real either way. When compound interest works *for* you — inside a properly structured policy, inside a whole life insurance contract with guaranteed growth and dividends — it is genuinely extraordinary. Money grows on money. Year after year. Uninterrupted.

But compound interest doesn't care whose side it's on.

When it's working against you — inside a credit card balance at 24.99%, inside a mortgage front-loaded with interest — it is equally relentless. The same mathematical force that builds generational wealth inside a policy is quietly bleeding you out on the other side of your personal balance sheet.

Most people are experiencing both at once without realizing it. They're losing to compound interest on their debt while earning almost nothing on their savings. The Purpose Driven Wealth Plan™ doesn't ask you to simply pay off the debt side. It asks you to flip the equation — redirect that same money so compound interest starts working entirely in your favor.

The Opportunity Cost Nobody Talks About

Here's what the minimum payment calculation leaves out entirely: what that money could have been doing instead.

Every dollar you send to a credit card company in interest is a dollar that isn't building cash value in a policy. It isn't compounding tax-free. It isn't growing your death benefit. It isn't becoming accessible capital you can borrow against for the next opportunity.

It's gone. And it takes its future growth with it.

This is what financial professionals call opportunity cost — and in the context of cash value life insurance, the opportunity cost of staying in debt without a plan is staggering. Not because the interest payments are painful today, though they are. But because every month you delay building the system is a month of compounding growth you can never get back.

A policy started today at 40 performs very differently than the same policy started at 45. Time is the one resource the Purpose Driven Wealth Plan™ cannot replace.

The Emotional Cost Is Real Too

Debt isn't just a math problem. Anyone carrying a significant balance knows this.

It's the low-grade anxiety that follows you into sleep. The guilt when the statement arrives. The quiet resignation that retirement might always be somewhere in the future but never quite in reach. The sense that no matter how hard you work, the numbers don't move.

That emotional weight has a cost too — in decisions not made, risks not taken, opportunities not pursued because the foundation feels too unstable to build on.

The Purpose Driven Wealth Plan™ addresses both. The math and the feeling. Because when you can see your cash value growing, your death benefit increasing, and your debt shrinking — all inside the same system — something shifts. You stop reacting to your finances and start designing them.

What This Actually Adds Up To

Let's be direct. If you are carrying $20,000 to $50,000 in credit card debt and making minimum payments or modest overpayments, you are likely spending $500 to $1,200 per month to stand still. That money is leaving your household and building nothing.

The Purpose Driven Wealth Plan™ takes that same payment and redirects it. Not to a different creditor. Not to a savings account earning fractions of a percent. Into a high cash value whole life policy that grows guaranteed, builds liquidity, and positions you to eliminate that debt faster — while simultaneously building the infrastructure for everything that comes after.

The debt gets paid. And when it's gone, you don't arrive at zero empty-handed.

That's Chapter 5. But first, you need to understand the engine that makes all of this possible.

Overfunded Life Insurance — What overfunding means, how it accelerates cash value growth, and why most agents never design policies this way.

Whole Life Insurance — A complete guide to how whole life works, what makes it different from term and universal life, and why mutual companies matter.

CHAPTER 3: The Engine—How a Properly Structured Policy Works

Let's get something out of the way immediately.

This is not a life insurance pitch.

If you've ever sat across from an agent who spent an hour explaining death benefits and monthly premiums without once mentioning cash value, liquidity, or how the policy could work for you while you're alive — you've experienced what most life insurance conversations look like. And you'd be right to be skeptical of another one.

This chapter is different. Because the policy inside the Purpose Driven Wealth Plan™ isn't being used as life insurance in the traditional sense. It's being used as infrastructure. And understanding the difference between a policy built for a commission and a policy built for banking is the difference between a tool that transforms your finances and one that just sits there costing you money.

Why Whole Life and Not Something Else

The financial world is full of products that promise growth. Index funds. IULs. Variable annuities. 401(k)s. Each comes with its own set of rules, risks, and limitations — most of which you don't discover until you need the money and find out you can't access it without a penalty, a tax hit, or a market-dependent balance that dropped 30% the year before you retired.

Whole life insurance from a mutual company is built differently. Not because it outperforms the stock market — it doesn't try to. But because it offers something the market never can: guarantees.

Your cash value grows every year. Guaranteed. Your death benefit is contractually defined. Guaranteed. Your policy cannot be canceled as long as premiums are paid. Guaranteed. And when a mutual company pays dividends — which the strongest ones have done for over 100 consecutive years including through recessions, depressions, and wars — those dividends compound on top of your guaranteed growth.

No market required. No luck required. Just a contract that does what it says.

That's the foundation the Purpose Driven Wealth Plan™ is built on. Not hope. Not market timing. A contractual guarantee from a company that has been keeping its promises longer than most of our grandparents have been alive.

The Two Components That Make This Work

Every whole life policy has two building blocks. Understanding both is essential to understanding why most policies fail at banking — and why a properly structured one succeeds.

The first is the **base premium**. This is the traditional portion of the policy — the part that covers the cost of the death benefit and builds cash value slowly over time. In a standard policy designed the conventional way, almost all of your premium goes here. The result is a policy that takes years to generate meaningful accessible cash value. That's good for the agent's commission. It's not good for you.

The second is the **Paid-Up Additions rider**, or PUA. This is where the Purpose Driven Wealth Plan™ diverges sharply from conventional whole life. Paid-up additions are additional amounts contributed on top of the base premium that go almost entirely to building immediate cash value. When a policy is designed with a high PUA ratio — more of your premium going to additions than to the base — cash value builds faster, becomes accessible sooner, and creates the liquidity engine the strategy depends on.

A properly structured policy might direct 70% or more of your total premium toward PUAs. The result is a policy where you could have access to 60% to 85% of your first-year contribution within months of starting — not years.

That early liquidity is what makes debt elimination possible from the beginning. Without it, you're waiting. With it, you're moving.

The Secret Power: Uninterrupted Compounding

Here is the feature that separates whole life from every other financial product, and the one that most people don't fully grasp until they see it in action.

When you take a loan against your policy's cash value, your cash value does not decrease.

Read that again.

You borrow against it. The insurance company uses your cash value as collateral. But your full cash value continues to grow — earning guaranteed interest and dividends — as if the loan never happened. The borrowed funds are out in the world working for you, eliminating a credit card balance or paying down a mortgage. And simultaneously, the cash value they're secured against is compounding uninterrupted inside the policy.

Your money is working in two places at once.

This is what Nelson Nash, the architect of the Infinite Banking Concept, called recapturing the banking function. Instead of sending interest to a bank and getting nothing back, you're borrowing from a system where your collateral keeps growing regardless. The interest on the policy loan is real — typically 5 to 6% simple interest — but it's being paid into a system you participate in as an owner, not to an institution profiting at your expense.

What "Properly Structured" Actually Means

This phrase gets used often in the IBC world. It deserves a precise definition.

A properly structured policy for the Purpose Driven Wealth Plan™ means the policy is:

Designed with a high PUA ratio to maximize early cash value. Funded as close to the Modified Endowment Contract limit as possible without crossing it — because crossing that line eliminates the tax advantages that make the whole strategy work. Issued by a mutual insurance company with a strong dividend history, not a stock company that answers to shareholders instead of policyholders. Built with flexibility, so premiums can be scaled up or down within a defined range as income changes.

Most agents don't design policies this way because doing so reduces their commission. The base premium is where agent compensation lives. PUAs reduce it. So the agent who puts your interests first — who builds your policy for maximum cash value rather than maximum commission — is making a deliberate choice to serve you over themselves.

That's the advisor you want. Chapter 7 will help you find one.

What This Engine Makes Possible

A properly structured policy inside the Purpose Driven Wealth Plan™ becomes the hub of your entire financial system. It's where you store capital safely. It's where you access liquidity without credit checks or approval processes. It's where your money compounds tax-advantaged year after year. And it's the source of funding that allows you to eliminate debt, pay down a mortgage, invest in real estate or a business, and eventually generate tax-free retirement income — all from the same vehicle.

It is not magic. It is not a loophole. It is a permanent life insurance contract from a mutual company, used with intention and structured for performance rather than commission.

That's the engine. In the next chapter, we put it in gear.

CHAPTER 4: Redirect, Repay, Reuse

Everything up to this point has been foundation.

You understand why the false choice between debt elimination and wealth building is a trap. You understand what your debt is actually costing you — not just in interest payments but in compounding growth that never happens. You understand why a properly structured whole life policy is the right engine for the Purpose Driven Wealth Plan™.

Now we put it to work.

The strategy has three steps. They are simple by design. Simple doesn't mean easy — it means clear. And clarity is what most people have never had about their own money.

Step One: Redirect

You are already spending the money.

That's the first thing to understand about the Purpose Driven Wealth Plan™. This is not about finding new dollars. It's not about earning more, cutting your lifestyle, or scraping together an extra payment every month. It's about redirecting dollars that are already leaving your household — and sending them somewhere that builds something instead of somewhere that builds nothing.

Right now, a portion of your income goes to credit card minimum payments every month. Some of it goes toward interest on a balance that barely moves. Some of it sits in a savings account earning a fraction of a percent. None of it is building a compounding, tax-advantaged, liquidity-generating system for your future.

The first move inside the Purpose Driven Wealth Plan™ is to redirect a portion of that existing cash flow into your high cash value whole life policy. Not all of it. A portion. Enough to begin building accessible cash value while you continue making minimum payments on your existing debt.

You're not abandoning your obligations. You're beginning to build the tool that will help you eliminate them — faster and more strategically than minimum payments ever could.

Within the first six to twelve months, depending on the size of your contribution and the design of your policy, you'll have meaningful accessible cash value. That's when Step Two begins.

Step Two: Repay

With accessible cash value in place, you take your first policy loan.

You target one debt — ideally a high-interest credit card with a balance your available cash value can cover — and you pay it off in full. Not a partial payment. Not an extra hundred dollars toward principal. You eliminate the balance entirely with a single policy loan.

Here is what happens in that moment:

The compounding interest on that card stops. Immediately. The minimum payment you were making every month is freed up. The psychological weight of that balance — gone. And your cash value, which secured the loan, continues to grow uninterrupted inside your policy as if the loan never happened.

You have replaced bad debt — expensive, compounding, creditor-controlled — with a policy loan that carries simple interest, has no fixed repayment schedule, and is owed to a system you participate in as an owner. The interest on a policy loan is real and should be taken seriously. But it is fundamentally different from credit card interest because it flows back into a mutual company where you hold a participating policy — not into a bank that has no obligation to you whatsoever.

You are not debt-free yet. But you have traded destructive debt for managed debt inside your own system. That is not a small distinction. That is the entire pivot.

Step Three: Reuse

This is where the Purpose Driven Wealth Plan™ reveals its full power.

The minimum payment you were making to that now-eliminated credit card? Redirect it. Add it to your policy funding. Or use it to begin repaying your policy loan — which rebuilds your available cash value and prepares you for the next round.

Either way, those dollars stay inside your system. They don't go back to a creditor. They don't sit idle. They go to work — growing your cash value, rebuilding your loan capacity, and positioning you to eliminate the next balance.

Then you do it again.

Target the next card. Take the next policy loan. Pay it off in full. Free up the payment. Redirect it back into the system. Repeat.

This is what Denise calls the Debt Crush Cycle. Each iteration builds momentum. Each eliminated payment becomes fuel for the next step. Each policy loan repaid restores capacity for the next opportunity. The system compounds — not just financially, but structurally. It gets more powerful the longer you run it.

What This Looks Like in Real Numbers

Jeff is 30 years old with $30,000 in credit card debt and a current monthly payment of $1,200. He starts the Purpose Driven Wealth Plan™ by redirecting $600 per month into a properly structured whole life policy and continuing $600 per month toward minimum credit card payments.

By the end of year one he has meaningful accessible cash value. He takes his first policy loan and eliminates his highest-interest card. That payment is freed up and redirected back into the system.

By year two he increases his policy funding to $900 per month as more payments are eliminated. By years three to four every credit card balance is gone.

But here's what makes Jeff's story different from a standard debt payoff story. He didn't just pay off $30,000 in debt. He built a policy that — even without repaying a single policy loan — grows to over $396,000 in net cash value by age 57. His death benefit is in place and growing from day one. His policy is optimized, compounding, and ready to accelerate.

He didn't spend more money. He redirected the same money into a better system.

A Note on Policy Loan Repayment

One of the most common questions about the Purpose Driven Wealth Plan™ is whether you have to repay the policy loans.

The answer is no — but the better answer is that it depends on your goals.

If you never repay a loan, the outstanding balance is simply deducted from your death benefit when you pass. Your cash value continues to grow. Your policy remains in force. There are no collections, no credit implications, no lender demanding payment.

But if you do repay — even partially, even on your own schedule — you rebuild your available capital and accelerate everything that comes next. Repaying a policy loan is not like repaying a bank. You are reloading your own system. You are putting your dollars back to work in a vehicle that compounds them and returns them to you with interest, on your terms, for the rest of your life.

That is the Purpose Driven Wealth Plan™ in motion. Not a one-time debt payoff. A permanent, repeatable, self-reinforcing system for moving money through your life instead of out of it.

The debt gets eliminated. And what remains is something far more valuable than a zero balance.

That's Chapter 5.

Volume Based Banking — The next evolution of Infinite Banking, focused on the volume and velocity of money moving through your system rather than rate optimization alone.

CHAPTER 5: The Different Zero

This is the chapter nobody else is writing.

Every debt payoff book, every financial guru, every online calculator celebrating your final payment — they all end at the same place. Zero. Debt eliminated. Balance cleared. You made it.

And then they move on. As if zero is zero. As if arriving at the absence of debt is the destination rather than the starting line.

It isn't. And the difference between the zeros people arrive at is the most important financial distinction most people never think to make.

Two People, Same Debt, Same Timeline

Meet two people. Both started with $30,000 in credit card debt. Both eliminated it in four years. Both arrive at the same moment — no balance, no minimum payment, no creditor claim on their monthly income.

The first person followed conventional advice. Snowballed the debt. Paid aggressively. Sacrificed and scraped and sent every available dollar to creditors until the balances hit zero. They did everything right by the traditional playbook.

They arrive at zero with a bank account earning 0.01% interest, no wealth-building infrastructure in place, and four years of compounding growth they'll never get back. They're debt-free. They are not wealthy. They are not even positioned for wealth. They are simply no longer behind.

Now they have to start.

The second person followed the Purpose Driven Wealth Plan™. They redirected a portion of that same cash flow into a properly structured whole life policy from day one. They used policy loans to eliminate balances strategically. They freed up payments and cycled them back into the system. They arrived at zero in roughly the same timeframe.

But their zero looks nothing like the first person's zero.

What the Purpose Driven Wealth Plan™ Zero Actually Looks Like

When the debt is gone inside the Purpose Driven Wealth Plan™, here is what exists on the other side:

A whole life policy that has been growing — guaranteed, uninterrupted, compounding — for four years. A death benefit that has been in place since day one, protecting the family from the moment the first premium was paid. A cash value balance that is accessible, liquid, and ready to be deployed for the next opportunity. A policy that is now optimized — past the slow early years, positioned for the accelerated growth phase that whole life is designed to deliver. And a system that is already built, already running, already compounding — not something that still needs to be created.

This is not magic. This is math inside better infrastructure.

The policy didn't eliminate the debt for free. The loans are real. The interest on those loans is real. The premiums required discipline and consistency. Nobody is pretending otherwise.

But the discipline that paid off the debt also built something. That's the difference. Every dollar that moved through the Purpose Driven Wealth Plan™ left something behind. Every dollar that moved through the conventional debt snowball left nothing but a cleared balance.

The Death Benefit Nobody Accounts For

Here is the piece that almost never appears in these conversations.

From the moment you fund your first premium, you have a leveraged death benefit in place. A $500 per month policy contribution doesn't create $500 worth of protection. It creates a death benefit that could be ten, twenty, or thirty times that amount — guaranteed, tax-free, and payable to your family the day after your first payment if necessary.

The person following the conventional debt payoff plan has none of this during those four years. They are paying down debt with no protection, no growth, and no infrastructure. If something happens to them in year two — illness, accident, death — their family inherits the debt and the absence of a plan.

The Purpose Driven Wealth Plan™ participant has protection from day one. They are building and protected simultaneously. That death benefit isn't a consolation prize — it's a core component of the system, growing alongside the cash value, positioned to become a legacy asset that outlasts the person who built it.

The Optimized Policy: What Four Years of Seasoning Means

Whole life insurance has a growth curve. In the early years, a larger portion of your premium covers policy costs. As the policy matures and cash value builds, the compounding effect accelerates. Dividends compound on a larger base. Guaranteed growth compounds on a larger base. The policy's internal efficiency improves with time.

By the time the debt is eliminated inside the Purpose Driven Wealth Plan™, the policy has crossed through those early years and is entering its most productive phase. The compounding engine is warmed up and ready to run.

This is what "optimized" means. Not a sales term. A mathematical reality. A policy that is four years seasoned is a fundamentally different financial instrument than a policy on day one — and infinitely more powerful than a savings account that was only just opened because someone finally finished paying off their debt the conventional way.

The conventional zero says: now I can start building.

The Purpose Driven Wealth Plan™ zero says: the building never stopped. Now it accelerates.

Reframing the Question

The question was never "should I pay off debt or build wealth?"

The right question is: "When this is done, what will I have?"

If the answer is a cleared balance and a savings account, you've won a battle inside a system that was never designed to serve you. You've arrived at zero on the bank's terms.

If the answer is a cleared balance, a seasoned whole life policy with accessible cash value, a leveraged death benefit, and a compounding system that has been running for years — you've arrived at zero on your terms. And it isn't really zero at all.

It is infrastructure. It is leverage. It is a launchpad.

The Infinite Banking Concept exists precisely because Nelson Nash asked this question and didn't accept the conventional answer. The Purpose Driven Wealth Plan™ exists because Denise Boisvert spent twenty years watching clients arrive at the wrong zero and decided to show them a better destination.

You don't have to choose between eliminating debt and building wealth.

You just have to choose the right system.

See what your zero looks like with the Purpose Driven Wealth Plan™

CHAPTER 6: What This Looks Like in Real Life

Concepts are useful. Numbers are convincing. But stories are what make a strategy real.

This chapter is about closing the gap between understanding the Purpose Driven Wealth Plan™ and seeing yourself in it. Because the most common reason people don't act isn't skepticism about the math. It's the quiet belief that this works for other people — people with more income, less debt, better timing, or some advantage they don't have.

Jeff and Lisa didn't have an advantage. They had a decision.

Jeff and Lisa: $30,000 in Debt, No Extra Income

Jeff is 30 years old. Lisa is his wife. Between them they carry $30,000 in credit card debt accumulated over years of real life — medical expenses, a job transition, the ordinary financial friction that catches most families off guard at some point.

Their current monthly credit card payment is $1,200. They are not making significant progress. The interest is relentless and the balances move slowly. They've tried the snowball. They've tried cutting expenses. They feel stuck in the way that most people carrying revolving debt feel stuck — like the finish line keeps moving.

They don't have extra money. They have the same $1,200 they've been sending to credit card companies every month.

That's where the Purpose Driven Wealth Plan™ begins.

Year One: Split the Flow

Jeff and Lisa redirect $600 per month into a properly structured whole life policy. The remaining $600 continues toward minimum credit card payments. Nothing about their total monthly outflow changes. They are not spending more. They are splitting the flow — half into a system that builds, half toward obligations that must be maintained.

By the end of year one, their policy has accumulated meaningful accessible cash value. The paid-up additions rider has been doing its work, directing the majority of their premium toward immediate cash value rather than base premium costs. They have a death benefit in place — a leveraged, guaranteed, tax-free benefit that has been protecting their family since the first payment.

They take their first policy loan. They target the highest-interest card and eliminate the balance in full.

That card's minimum payment is now freed. The interest that was compounding against them every day on that balance — stopped.

Year Two: The System Gains Momentum

With one card eliminated, Jeff and Lisa increase their policy funding to $900 per month. The freed payment from the eliminated card flows back into the system. They continue minimum payments on remaining balances.

They take a second policy loan. Another card eliminated. Another minimum payment freed. Another source of compounding interest permanently stopped.

Their cash value is growing. Their death benefit is growing. Their debt is shrinking. All of this is happening simultaneously — not sequentially, not one after the other, but at the same time inside the same system.

This is the part the conventional debt payoff model cannot replicate. The Infinite Banking Concept doesn't ask you to wait until the debt is gone to start building. It builds while the debt is being eliminated. Every month that passes, both things are happening.

Years Three and Four: The Final Push

By year three Jeff and Lisa are funding their policy at $900 to $1,000 per month. The remaining credit card balances are within reach. They take their final policy loans, eliminate the last balances, and arrive at zero.

But as we established in Chapter 5, this is not the zero most people arrive at.

Their policy has been running for four years. It is seasoned, optimized, and entering its most productive compounding phase. They have accessible cash value. They have a leveraged death benefit. They have a system that has been building quietly and persistently through every month of the debt elimination process.

They didn't pay off $30,000 in debt. They transformed $30,000 in destructive debt into the foundation of a permanent financial system — using the same dollars they were already spending.

The Number That Matters Most

Here is what the Purpose Driven Wealth Plan™ produces for Jeff even if he never repays a single policy loan after year four.

By age 57 — without additional contributions beyond what was already planned, without loan repayments, without any heroic financial effort — his policy has built over $396,000 in net cash value.

Let that land.

He redirected money he was already spending. He eliminated $30,000 in credit card debt. And he built nearly $400,000 in tax-advantaged, accessible, compounding wealth — inside a system that also protected his family with a death benefit from day one.

This is not a best-case projection. This is the math of uninterrupted compounding inside a properly structured mutual company whole life policy, applied consistently over time.

It is not magic. It is infrastructure performing exactly as designed.

What Happens When the Loans Are Repaid

Jeff and Lisa choose to redirect the $1,200 per month they were sending to credit card companies — now fully freed — into repaying their policy loans. They pay themselves back on the same schedule they were paying creditors, except now every dollar flows back into their own system.

By year seventeen all outstanding policy loans are repaid. Their cash value is fully restored and compounding on a clean base.

At age 60, their net cash value has grown to $578,580.

Same household. Same income. Same starting point. Dramatically different destination — because they chose a different system at the beginning.

What About Someone Starting With More Debt or Less Cash Flow?

The Purpose Driven Wealth Plan™ is not a fixed formula. It is a framework that scales.

Someone starting with $50,000 in debt adjusts the split. Someone with $500 per month instead of $1,200 starts smaller and builds at a slower pace. Someone with variable income uses the flexible premium design of a properly structured policy to contribute more in strong months and less when cash flow tightens.

The mechanics are the same regardless of the starting point. Redirect. Repay. Reuse. The system works because it is built around the money you already have — not the money you wish you had.

What changes with scale is the timeline, not the outcome. The outcome — a seasoned policy, a leveraged death benefit, accessible cash value, and a compounding engine that outlasts the debt — is the same whether you start with $250 a month or $2,500.

The Question This Chapter Answers

People come to the Purpose Driven Wealth Plan™ asking whether it works.

Jeff and Lisa answer that question. Not with a testimonial. With a policy illustration, a debt payoff timeline, and a net cash value figure at age 57 and age 60 that no savings account, no debt snowball, and no conventional financial playbook can produce from the same starting point.

It works because the math is sound. It works because mutual company whole life is built on guarantees. And it works because Volume Based Banking — the principle of moving money through your system with purpose and velocity — is more powerful than chasing a higher interest rate on a savings account while debt compounds against you on the other side.

The strategy is real. The numbers are real. The only variable is the decision to begin.

CHAPTER 7: Your Next Step

You've just read six chapters that most financial advisors, insurance agents, and self-proclaimed money gurus will never show you.

You understand the false choice. You've seen the real cost of debt. You know what a properly structured policy does and why it works. You've walked through the Redirect, Repay, Reuse strategy step by step. You understand the difference between the conventional zero and the Purpose Driven Wealth Plan™ zero. And you've seen what the math produces for real people starting from exactly where you are.

The question now is a simple one.

What are you going to do with it?

Why Most People Stop Here

There is a particular kind of inaction that lives at the end of financial education. You've learned something real. You believe it. You can see how it applies to your situation. And then — nothing. The information sits in a file somewhere, or a browser tab that never gets revisited, or a conversation you meant to have but haven't.

This is not a character flaw. It is a predictable response to complexity without a clear next step.

So here is the clear next step.

The Full Blueprint Is In the Book

This ebook introduced you to the Purpose Driven Wealth Plan™. It gave you the framework, the strategy, and the math. What it didn't give you — because it couldn't in this format — is the complete implementation guide.

Designing a Debt-Free Life with the Purpose Driven Wealth Plan™ by Denise Boisvert and Steve Gibbs, Esq. AEP is that guide.

In the full book you will find:

The complete Redirect, Repay, Reuse strategy applied to credit card debt, mortgage payoff, and retirement income — in that sequence, with real illustrations and real numbers at each stage. A detailed walkthrough of how to use your policy to pay off your mortgage without refinancing — eliminating years of payments and tens of thousands in interest while your cash value continues to grow. How to turn your policy into a tax-free retirement income stream that coordinates with Social Security, avoids required minimum distributions, and never exposes you to market loss. The living benefits inside a properly structured policy — chronic illness riders, accelerated death benefit riders, and how they protect you when life doesn't follow the plan. Legacy planning through a revocable living trust funded by your policy — how to pass wealth to the next generation without probate, without unnecessary taxation, and without leaving your family to figure it out without a blueprint. And perhaps most importantly — how to choose the right advisor, ask the right questions, and avoid the agents who will design a policy for their commission rather than your future.

The book is the complete system. This ebook was the door.

Book a Conversation With Denise

Reading about the Purpose Driven Wealth Plan™ is one thing. Seeing what it looks like applied to your specific numbers — your debt, your income, your timeline, your goals — is something else entirely.

Denise has spent over twenty years designing these policies for real people in real financial situations. She has seen every variation of this starting point. She knows what a policy designed for your life looks like, and she knows how to show you the math in a way that makes the decision clear rather than complicated.

A consultation with Denise is not a sales call. It is a strategy session. You bring your numbers. She brings twenty years of experience and a policy illustration built around your specific situation. You leave with clarity — either a plan that makes sense for your life, or an honest conversation about why the timing isn't right and what would need to change before it is.

There is no pressure. There is no obligation. There is only information — the kind of information that lets you make a real decision rather than an anxious one.

Steve Gibbs, Esq. AEP brings an additional dimension to that conversation. As an estate planning attorney and Accredited Estate Planner, Steve sees the Purpose Driven Wealth Plan™ not just as a debt elimination strategy but as the foundation of a complete financial legacy. The policy that eliminates your credit card debt today becomes the tax-free inheritance your family receives tomorrow. The cash value that funds your retirement also funds the trust that protects your children. These are not separate conversations. They are one conversation — and having both Denise and Steve's expertise behind your plan means nothing is left unaddressed.

Schedule your consultation with Denise at InsuranceandEstates.com.

What to Bring to That Conversation

To make your first conversation as useful as possible, come with a general sense of the following:

Your current monthly credit card payments and approximate balances. Your mortgage balance and remaining term if applicable. A rough monthly figure you could realistically redirect into a policy — even a conservative estimate is enough to begin. Your age and general health, which determines which carriers and policy structures are available to you. Any goals beyond debt elimination — retirement income, legacy planning, business funding — so the policy can be designed with the full picture in mind.

You don't need to have perfect numbers. You don't need to have everything figured out. You need to show up with a willingness to look at your situation honestly — and Denise will do the rest.

A Final Word from Denise and Steve

The Purpose Driven Wealth Plan™ was built for people who are tired of doing everything right inside a system that wasn't designed to reward them.

You've worked hard. You've made payments. You've tried to save. And you've probably felt, at some point, that no matter how disciplined you are, the finish line stays just out of reach.

That feeling is not a personal failure. It is an accurate read of a system that profits from your debt, your deposits, and your dependence on institutions that answer to shareholders — not to you.

The Purpose Driven Wealth Plan™ exists because there is a better system. One built on guarantees instead of hope. On liquidity instead of lockup. On compounding that works for you instead of against you. On a death benefit that protects your family while your cash value builds your future.

You don't need more income to start. You don't need to be debt-free first. You need a decision and a properly structured policy — and someone who knows how to build one that serves your life rather than someone else's commission.

That's what we do.

The door is open. We'd be honored to walk through it with you.

WHAT READERS ARE SAYING ABOUT *Designing a Debt-Free Life with the Purpose Driven Wealth Plan™*

"For the first time, I feel like I actually have a plan to not only pay off debt but also start building real long term security. It gave me hope and direction I really needed." — Jacque P., Verified Purchase

"I wasn't sure what to expect with this book, but wow — it really made me rethink everything I knew about money. The whole idea of using whole life insurance as a banking system? Mind blown. I loved the part about paying off credit card debt with that 'Redirect, Repay, Reuse' strategy — actually feels doable." — Sunghwan N., Verified Purchase

"The first part of breaking free from debt is the 'silent killer' of savings, investments, and wealth and is not discussed enough. Strong recommendation." — Idan, Verified Purchase

"I never knew you could borrow from a whole life insurance policy. This book was eye opening for me. Many wealthy people use these loans to create more wealth without being taxed." — RD, Verified Purchase

"Boisvert's book can change how you think about money. Easy steps, real-life examples, and charts that made everything clear. If you're serious about crushing debt and growing real wealth, you need a good read like this." — D Rob, Verified Purchase
